

Two prospects for bookmarking sites are:

Semantic Scuttle:

<https://selfhosted.libhunt.com/semanticscuttle-alternatives>

Lobster:

<https://github.com/lobsters/lobsters>

I think Lobster is most fitting however it will need it on Virtual Private Server as it requires Ruby on Rails which is more than standard managed hosting of LAMP. Cost for where I host in Iceland is \$5/mo. I could easily afford this on Tuesday.

A demo of Lobster:

<https://lobste.rs/>

I am testing out Semanticscuttle for now.

Thoughts?
